SUMMARY

Senior backend engineer with 4+ years building APIs and microservices, mostly in Go and Python. I spent four years on Mercado Libre's identity and access team, where the APIs I worked on handle 1 000 000+ requests a day. Since then I've taken backend contracts for Compass and The Home Depot US. I care about services that answer fast and access rules that hold up.

EXPERIENCE

Backend Engineer · Workstate, Compass — Apr 2026 - Jul 2026 · Remote, Contract

- I rebuilt a core Go microservice and cut P95 response times by 90%, which removed a bottleneck that kept coming back in the platform's request pipeline.
- I built Go services and REST APIs for Compass, one of the leading real estate platforms in the US, working with distributed international teams.

Tech: Go, gRPC, GCP, Kubernetes, Grafana

Backend Developer · NEORIS, The Home Depot US — Dec 2025 - Mar 2026 · Remote, Contract

- I led the technical planning and development of Go gRPC microservices for inventory management in The Home Depot's US retail ecosystem.
- I designed event-driven workflows on GCP with Pub/Sub and Cloud Workflows, so multi-step operations run asynchronously.
- I automated deployments and infrastructure with GitHub Actions, Spinnaker and Terraform.
- I moved secrets into Vault and tuned caching on Redis (Memorystore). Grafana told me whether it worked.

Tech: Go, gRPC, GCP, Pub/Sub, Redis, Vault, Terraform, GitHub Actions, Spinnaker, Grafana

Backend Developer Consultant · Personally AI — Oct 2025 - Nov 2025 · Remote, Contract

- I built a RAG chatbot on WhatsApp for a presidential campaign. It ran a local model through Ollama, with Twilio handling the messaging.
- I wrote a hostility filter that caught abusive messages and prompt-injection attempts before they reached the model.
- I kept the knowledge base current with Selenium scrapers on a 24-hour refresh. The bot served 1 000+ active users.

Tech: Python, Ollama, RAG, Selenium, Twilio, WhatsApp API

Cybersecurity Developer, IAM · Mercado Libre — Jun 2021 - Sep 2025 · Hybrid, Full-time

- I built and scaled Go and Python microservices for the identity and access platform. Its APIs handle 1 000 000+ requests a day from 40 000+ employees and 100 000+ external partners.
- I automated provisioning, deprovisioning and access rotation for Mercado Libre employees across AWS, GCP and 100+ internal systems.
- I cut API response times by 35% by reworking query plans and indexes on the busiest endpoints.
- I built an internal engine that automates periodic access reviews.
- I implemented regional data segmentation so identity data meets LATAM regulatory requirements.

Tech: Go, Python, REST APIs, IAM, RBAC, OAuth2, AWS, GCP

PROJECTS

- **tax-time** (tax-time.gabotachak.dev): Colombian AI tax advisor that runs 100% locally on Ollama. No internet, no subscriptions. Python, Ollama, RAG
- **SIA Bridge** (sia.gabotachak.dev): Course-scheduling assistant for Universidad Nacional de Colombia's registration system. Queries that take about 2 s on the official system come back in about 1 ms. Go, Docker

EDUCATION

B.Sc. Systems and Computing Engineering, Universidad Nacional de Colombia (Expected 2027)
Former Teaching Assistant, Numerical Methods (Python)

SKILLS (SELF-ASSESSED, 1 TO 5)

Category	Skill / Tool	Rating	Category	Skill / Tool	Rating
Languages	Go	5/5	DevOps	Kubernetes	4/5
Languages	Python	5/5	DevOps	GitHub Actions & CI/CD	4/5
Languages	SQL	4/5	DevOps	Terraform	4/5
Frameworks	Gin / Gorilla Mux	5/5	DevOps	Grafana	4/5
Frameworks	FastAPI / Django / Flask	5/5	DevOps	Spinnaker	3/5
Protocols	gRPC & REST APIs	5/5	Security	OAuth2, JWT & RBAC	4/5
Architecture	Distributed Systems	4/5	Security	Vault	4/5
Databases	PostgreSQL / MySQL	4/5	AI / LLM	Ollama	3/5
Databases	Redis / MongoDB	4/5	AI / LLM	LlamaIndex	3/5
Cloud	GCP (Pub/Sub, Workflows, Storage)	4/5	Tools	Selenium	3/5
DevOps	Docker & Linux	4/5	Tools	Twilio	3/5
